Notes:

1. $P_D(t) = \frac{T_J - T_A}{R_{\theta JA}(t)} = \frac{T_J - T_A}{R_{\theta JC} + R_{\theta CA}(t)} = I_D^2(t) \times R_{DS(ON)@T_J}$, R_{θJA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. R_{θJC} is guaranteed by design while R_{θCA} is defined by users. For general reference: Applications on 4.5"x5" FR-4 PCB under still air environment, typical R_{θJA} is found to be:

- a. 42°C when mounted on a 1 in² pad of 2oz copper.
- b. 95°C when mounted on a 0.066in² pad of 2oz copper.
- c. 110°C/W when mounted on a 0.00123in² pad of 2oz copper.
