
Low Cost Linear Hall Effect Sensor IC

FEATURES

- Single current sourcing output
- Low noise output eliminates the need for filtering
- -40°C to 105°C wide ambient temperature range
- Responds to either positive or negative Magnetic Field
- Resistant to mechanical stress
- 3-pin SIP, SOT23 and 6-pin DFN1616 package is available

APPLICATIONS

- Motor control
- Keyboard
- Position sensing
- Current sensing
- Weigh and liquid level sensing

DESCRIPTION

The SC4011 is a small, economical, linear Hall sensor chip with an output voltage proportional to the supply voltage and to the intensity of the magnetic field it induces.

The SC4011's zero output voltage (without magnetic field) defaults to half of the supply voltage, with a typical sensitivity of 2.9mV/Gs at 5.0V supply voltage and 1.6mV/Gs at 3.3V supply voltage.

The typical working voltage of the chip is 3.3V or 5.0V, the limit voltage can be up to 25V, the working temperature range supports -40--105 °C , suitable for commercial, consumer and industrial fields

These devices are available in a 3-pin SIP package (UA)、a 3-pin SOT-23 package (SO) And a 6-pin DFN1616 package (DN) . Both packages are lead (Pb) free, with 100% matte tin lead frame plating.

TYPICAL APPLICATION

The chip's static (zero magnetic field strength) output voltage, V_Q , is typically half the power supply voltage within the operating voltage range of the supply. When the magnetic field of S pole perpendicular to the screen surface of the chip increases, the output voltage of the chip increases proportionally. On the contrary, when the N electrode acts on the screen surface of the chip, the output voltage decreases synchronously with the same proportion. The maximum output voltage of the chip is $V_{CC}-0.7V$ at room temperature, and the minimum output voltage is $0.8V$, in which the linear range is $1.0V \sim V_{CC}-1.0V$.

PACKAGE INFORMATION (UA)

Notes:

1. Exact body and lead configuration at vendor's option within limits shown.
2. Height does not include mold gate flash.

Where no tolerance is specified, dimension is nominal.
